

ABD ENNOUR ABBES

abbes.abdenmour13@gmail.com | linkedin.com/in/abd-ennour-abbes-208170276 | abbestlm.github.io/abbes.tlm

TECHNICAL SKILLS

- Languages: JavaScript (Node.js), TypeScript, Python, C#, SQL, HTML/CSS
- Frameworks & Libraries: React, Tailwind CSS, TensorFlow, Express
- Cloud & DevOps: Google Cloud Platform (GCP), Google Compute Engine, Cloud SQL, Docker, CI/CD, Git
- Architecture & Tools: RESTful APIs, Microservices, OAuth2, Webhooks, Stripe/PayPal Integration, JWT, Master Data Management (MDM)

PROFESSIONAL EXPERIENCE

Data Steward – Veeva Systems (Remote Contractor | Aug 2026–Present)

- Validated global healthcare professional (HCP) and healthcare organization (HCO) master data registries.
- Processed Data Change Requests (DCR) to maintain reference data integrity across regional master datasets.
- Cross-checked unstructured healthcare reference data against official medical boards and national regulatory registries.
- Ensured strict compliance with data privacy regulations and governance standards during lifecycle management.

Software Engineer – Powertrip Games LLC (Las Vegas, Nevada | 2024–2026 | Remote Contractor)

- Designed Node.js RESTful APIs with OAuth2 security and integrated Stripe/PayPal via Webhooks for secure payment processing.
- Engineered Google Cloud SQL schemas, achieving sub-second query performance during peak loads.
- Built automated CI/CD pipelines for iOS, Android, and WebGL, eliminating manual release bottlenecks.
- Containerized microservices using Docker on Google Compute Engine with horizontal auto-scaling infrastructure.
- Resolved over 50 concurrency bottlenecks through rigorous end-to-end stress testing.

PROJECTS

Server-Dedicated Multiplayer Game Backend | Node.js, PostgreSQL, C#, Unity2D

- Built a dedicated multiplayer backend utilizing server-authoritative architecture, JWT authentication, and geolocation-based matchmaking.
- Integrated Stripe payment processing and implemented anti-cheat logic to secure player accounts and digital rewards.

Leukemia Detection AI System | Python, TensorFlow

- Trained a 4-CNN ensemble model on 10,000 blood cell images to reach an 92% validation accuracy.
- Developed a pipeline to classify leukemia types/stages and analyze white blood cell morphology.

Stock Market Dashboard | React, TypeScript, Tailwind CSS

- Built a responsive web interface that streams live stock price data from public APIs in real time.
- Rendered interactive data visualization charts for financial market analysis.

EDUCATION

Master of Information Systems & Knowledge – University of Tlemcen

- Thesis: Leukemia Detection AI System
- Coursework: System Architecture, Database Engineering, Artificial Intelligence, Advanced Algorithms

CERTIFICATIONS & LANGUAGES

- Certifications: Veeva OpenData Data Steward Certification, EF SET English Certificate – C1 Advanced (cert.efset.org/en/qGNexL)
- Languages: Arabic (Native), English (Fluent/C1), French (Intermediate)
